Grafana Monitoring Evidence — Addendum

CloudOps Enterprise Platform | 12 November 2026

This later screenshot supplements the monitoring evidence in the main project report. It visibly shows Backend Availability as UP, an Application Uptime time series, JVM memory usage series, and HTTP request-rate data. The Database Active Connections panel is also visible. The 95th-percentile request-duration panel is partly below the captured screen area and is not claimed as verified by this screenshot.

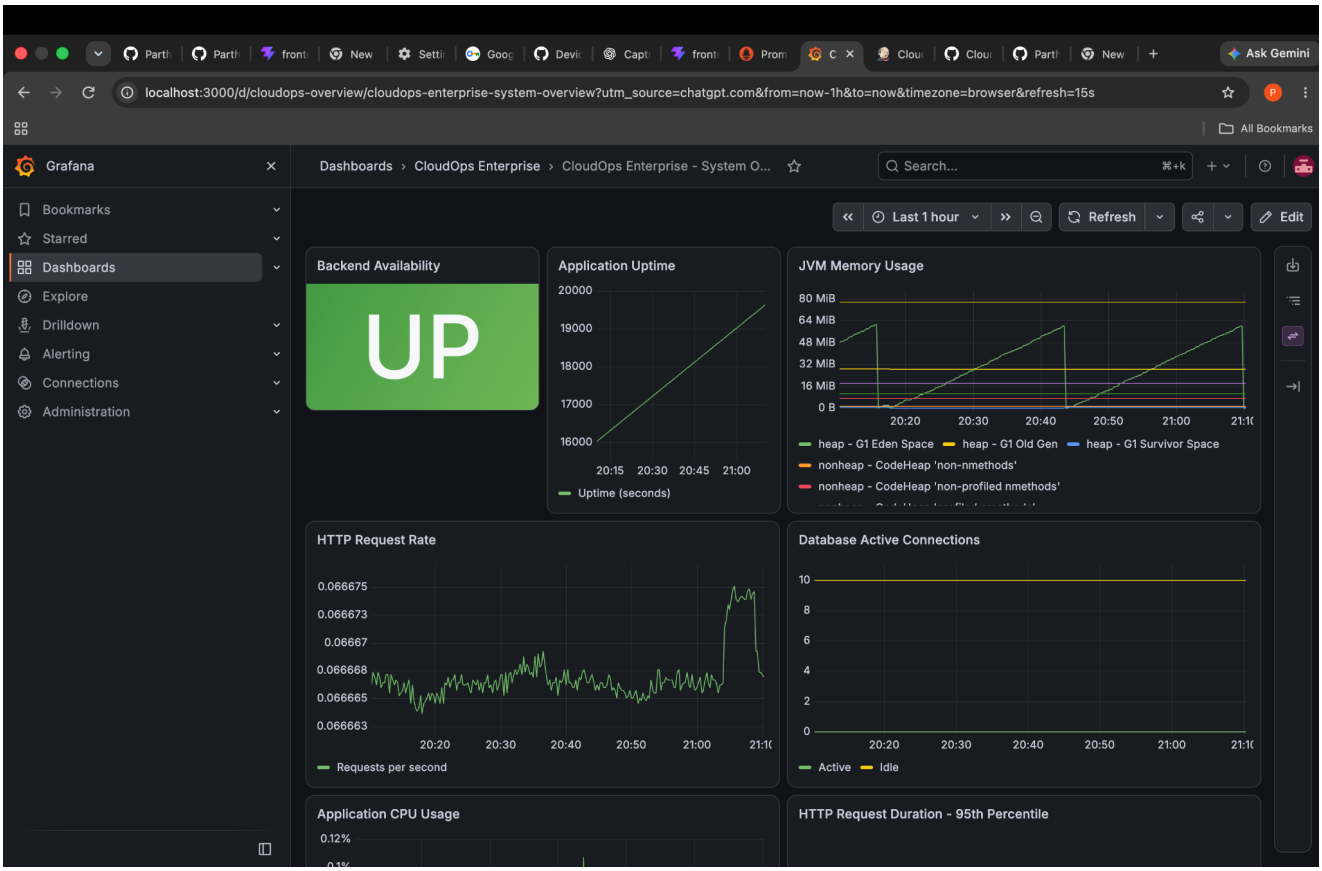

Figure G1. Later Grafana dashboard snapshot supplied by the project owner. This is point-in-time visual evidence, not a guarantee of continuous monitoring health.
